STANDARD ROLL OUT MODEL

TROJAN HORSE
INTERIORS

SIMPLE SOLUTIONS
for
COMMERCIAL
SPACES

"With a need to amalgamate several business units into one cohesive entity, this national battery supply group were looking to reflect the change and create a point of difference against competitors. A nationwide roll-out of branches was planned and Trojan Horse Interiors were engaged by the client's corporate branding group to create a standard model for retail distribution centres.

To achieve consistent operation and appearance across all proposed sites, a kit of parts was designed and documented. This ensured that the concept could be scaled according to the prominence, size and physical difficulties encountered at each site location.

Modular components, mass produced and flat packed, enables efficiencies of scale to be achieved in regards to construction and transport. Heavy duty steel shelving units to accommodate battery weight were custom designed from standardised componentry, while hard wearing finishes were applied to furniture, walls and flooring to create an industrial aesthetic.

Now established, this standard template enables the client easy duplication of the concept and a throughout their group."
